
Accreditation to Technical Criteria

Low Voltage Electrical Installations up to 1kV (Defined Approval)

Classification in this category is intended for those enterprises undertaking electrical installation work, the approval being limited to the installation, extension or alteration of a single Low Voltage (LV) circuit supplying for example a domestic type central heating system, intruder alarm/CCTV system etc. The use of SELECT Electrical Installation Certificates must be limited to this category of work.

Classification in this category may be achieved if the enterprise:

- Has publications and documentation appropriate to the range and scale of electrical installation work undertaken, which must include BS 7671: 2008 and the Memorandum of Guidance on the Electricity at Work Regulations 1989 (or equivalent).
- Will undertake that all work is carried out by competent persons to a standard not less than that laid down in BS 7671 including appropriate verification, and shall conform with the requirements of the Electricity at Work Regulations 1989.
- Has at least one nominated competent person who is either a principal or full-time employee of the company, and has the necessary skills and experience to carry out the work. In addition has successfully completed recent assessed training in Design and Verification of Electrical Installations to current regulations (see note below), and has completed at least two years supervisory experience in the industry.

Note:

Appropriate assessed training carried out within the last five years would be considered to meet the requirement for recent training. This however is at the discretion of the Central Board depending on the level of knowledge and experience of the nominated competent person, and the scope of work undertaken.
